

of the Disclosure

5 A handheld computerized golf data recording,
reporting and advising unit, and a method for its
operation. The unit itself is a small, comfortably
handheld computerized unit with a generally writable
display and a simplified key control panel to enter and
retrieve data. Using the key control panel, a golfer can
selectively retrieve a number of pre-formatted screens
corresponding to pre-game, game-interactive and post-game
10 recording and reporting of golf facts statistics and
general golf knowledge. The pre-game screens contain data
input fields having predetermined sets of values a user
selects to provide information required by the game-
interactive and game-reporting screens and algorithms to
15 process, store and report information. The information
entered in the pre-game and game-interactive mode is
automatically stored in the memory of the unit and
subsequently formatted into one or more statistical reports
upon request by the user.
